

# **FERTMARK CODE OF PRACTICE**

## **FEBRUARY 2015 VERSION**

### **SUMMARY OF CHANGES**

On 13 February 2015, the Annual General Meeting of the Fertiliser Quality Council approved changes to the Fertmark Code of Practice.

These changes were (in summary):

- The Copyright Notice (page 2) was amended.
- The Constitution of the Fertiliser Quality Council (page 11 onwards) was amended to allow the Codes to be altered by the Executive Committee of the Fertiliser Quality Council (rather than only at the AGM).
- The following Industry Agreed Reference Test Methods were added or amended in Appendix One of the Fertmark Code:
  - the wet sieve test method (amended)
  - the dry sieve test method (amended)
  - the biuret method for urea (amended)
  - the granule strength method (amended)
  - granule attrition method (amended)
  - moisture in fertilisers method (amended)
  - heavy metals in fertilisers (amended)
  - formic soluble phosphorous (new)
  - elemental sulphur in fertilisers (amended)
  - sulphate sulphur in fertilisers (amended)
